

NANO Jellies FAQ

- Q:** Are the NANO Jellies USDA Organic Certified?
- A:** Yes they are! The Broad Spectrum Hemp Flower used in the NANO-Jellies is USDA Certified Organic, as well as all of the other ingredients used in the Jellies.
- Q:** Are the NANO Jellies Gluten free?
- A:** Yes, the NANO Jellies are Gluten free.
- Q:** Are the NANO Jellies vegan?
- A:** Yes! There is a fish gelatin that is used as a processing aid during the production of the Jellies, but it is removed by filtration. This means the finished product of the NANO Jellies are vegan.
- Q:** How are the NANO Jellies made?
- A:** Green Compass uses a proprietary NANO-Emulsion process that has the highest bioavailability possible, up to 10x that of a tincture!
- Q:** How does this NANO-Emulsion process work?
- A:** The NANO Jellies formula is a Green Compass proprietary formula, and the extract used in the Jellies is created from a Green Compass proprietary extraction process. Green Compass's Chief Science Officer has worked closely with PhD Food Scientists to create this proprietary NANO-Emulsion process and earn our USDA certification to ensure a clean product.
- Q:** How can I explain the bioavailability of the NANO Jellies compared to other gummies on the market?
- A:** The NANO Jellies have 5-10x higher bioavailability than other gummies on the market, because others are not water soluble and break down with minimal to no absorption. This is the first EVER USDA organic, water-soluble, broad-spectrum Jelly on the market!! (**Key phrase: ...than other gummies, NOT than the tinctures**)
- Q:** How can I explain the bioavailability of the NANO Jellies compared to the tinctures?
- A:** The 5mg USDA NANO Jellies have the same bioavailability as a full dropper of the 750-1500mg tinctures. Some will prefer this delivery method due to the convenience of being able to swallow it on the go without having to hold under tongue. (**Key phrase: ...same bioavailability than a 750-1500mg tincture, NOT the same amount of CBD as the tincture**)
- Q:** Do we have research/studies on the bioavailability of the Jellies?
- A:** There is research available online about how water-soluble CBD is more readily absorbed by the body.

- Q:** What are the “Natural Flavors” included in this product?
- A:** The “natural flavors” are natural citrus fruit extracts mixed with a natural carrier. It is a proprietary mixture that has been approved by our USDA Organic certifier.
- Q:** How much sugar is used to **dust** the Jellies?
- A:** We dust the Jellies lightly with organic sugar to prevent them from sticking in the jar. This is a very small amount of sugar and would be less than a gram total per jar for the **dusting**.
- Q:** What is the suggested use of this product?
- A:** Green Compass suggests taking 1-2 Jellies per day, as needed. Please consult your physician before giving to young children, or if you are pregnant, nursing, or taking other medications.
- Q:** Because the mg is higher than 500, should I adjust my intake of this product if I am used to taking a 500mg tincture?
- A:** That is up to you! Green Compass recommends speaking to your physician if you have questions regarding how many Jellies to take per day, potential interactions with medications, as well as trying the product to see the full benefits you experience. Then, you can adjust the amount you take depending on the benefits seen!
- Q:** How can I adjust my serving size if I want to start with a smaller serving size?
- A:** The Jellies are a solid, and the Hemp Flower Extract is distributed evenly throughout each Jelly. Because of this, you can cut a Jelly, or simply bite it, if you do not wish to take a whole Jelly at once!
- Q:** Is the CBD distributed evenly throughout the Jelly, so they can be cut to adjust serving size without affecting the amount being taken?
- A:** Yes! Because of the NANO-Emulsion process, the Broad Spectrum Hemp Flower Extract is distributed evenly throughout the product.
- Q:** Are the NANO Jellies safe for kids?
- A:** Green Compass recommends speaking to your physician before giving the NANO-Jellies to young children, but many parents choose this THC-free delivery option for their children.
- Q:** Is the Jelly more effective than a tincture?
- A:** Many people have amazing results with the tincture. The Jellies are formulated with the same USDA Certified Organic Hemp extract. This is an option for those who want the convenience of a Jelly, or perhaps don't prefer the “oil under the tongue” method of delivery. Because there is higher bioavailability in the Jelly, the amount of CBD in each serving is much less than that of a tincture. One Jelly contains the same bioavailable CBD as a 25-50mg does via tincture.

Q: Can I take both?

A: YES! Some people will choose both options. Perhaps tincture in the morning, and Jelly at night- or vice versa. Listen to your body and determine what is best for you.

Q: What is the shelf-life of the NANO Jellies?

A: The shelf-life for this product is one year.

Q: What does the NANO Jelly COA test for?

A: The NANO Jelly is only tested for potency. The other ingredients are Certified Organic which means they already have met the required standards.
